

EUSAC SAFETY MESSAGE

BACKFEED

IT'S REAL!

It doesn't occur often, but when workmen don't protect themselves from sources of back feed, it can be deadly! With the increasing efforts in "green energy" and personal generating sources, (like solar & wind) the dangers continue to increase for workers. A discussion about how to identify and isolate known & unknown generation sources would be a topic to discuss at your safety meeting.

EUSAC welcomes comments, questions, and input from all interested members and parties. Please contact your local representative or safety professional.
