

INSULATE - ISOLATE - EQUAL POTENTIAL

**We've all heard the saying:
"If it's not grounded it's not dead."**

**Tragically, the saying should be:
"If it's not grounded **CORRECTLY** it's not dead."**

Please discuss these 3 acceptable methods of work at your Safety Meeting:

- 1. Insulate.**
- 2. Isolate.**
- 3. Equal potential grounding & bonding.** (Bonding is a method of physically interconnecting conductive parts to maintain a common potential. The objective of bonding is to avoid harmful shock currents by minimizing any potential difference throughout the lineman's body.)
